The Positive Deviant

By Maurice

This book by life long sustainability leader Sara Parkin is a must read for those who are concerned with humanities fate as we overwhelm our Earths capacity to support our material economies. We need to remember that human economics is a subset of ecology, and that the environment does not need saving - we do!

This book, written in the context of a Masters Leadership programme, sets out a sound theoretical frame, then moves to leadership training and onto pragmatic action for leaders at every level and scale. The scientific back story is clearly developed with appropriate citations.

Please,read and act on this book.

Piece of hype and crap

By Lance K. Mertz

No science, no considered opinions, just a bunch of business bashing, hysterical wailing. Don't bother.

If you want to read a good book on the subject read: The World in 2050: Four Forces Shaping Civilization's Northern Future.

I sent it back after trying to read the first chapter.
